Cloud to Point Server (CPS)

Software Solution Server Platform

The SQL server solution is installed on a Secure Amazon cloud network which provides an off site Secure reliable service with proven SLA uptime for your private use. Your field devices now communicate to this server, which can be accessed by you and your staff via a secure Windows remote desktop connection.

The CPS (Cloud Point Server) has the ability to send alarm information across the public Ip network to a nominated control room of your choice via the optional Siip interface.
